3. Power-Station:

Total employed on 1 October 1951: 1,516, of whom 1,269 were laborers.

4. Supply dump:

Provision of material for the Kombinat presents great difficulties. The major obstacle lies in the procurement of distilling tubes, cable, and other electric equipment, because for the most part, these must be procured from the West. Money is lacking in many cases, since the plant is assigned a definite amount every month which cannot be exceeded.

5. Factory Guards:

The gasoline works and the brown coal works are guarded by the Volkspolizei alone -- a total of about 170 men. The power station is guarded by Russian soldiers as well as by Volkspolizei.

Chief of the gasoline works guards is Oberkommissar Zenner:

25X1

25X1

There are lights placed along the fence around the entire works; in addition it is surrounded with watchtowers, which are equipped with searchlights.

Admittance to the works can only be gained with a work pass or a visitor's pass. The open pit mines are guarded by squads of police. There are also stationary posts at the most important open pits.
